AB The facially amphiphilic polymers and oligomers are used as antimicrobial agents and antidotes for hemorrhagic complications associated with heparin therapy. The design and synthesis of facially amphiphilic polymers and oligomers is discussed. The protocol followed to synthesize example polyamide was a reaction of 0.1 mmol 2,6-Diamino-4-tert-butyl-1-(2-tert-butoxycarbonylaminoethyl)sulfanylbenzene dissolved in 3 mL DMF with isophthaloyl dichloride (0.1 mmol), triethylamine (0.2 mmol) and N,N-dimethylethylenediamine (0.2/n mmol) (sic) while stirring under N for 18 h, after the volume of solvent was reduced to 1 mL, water was added to precipitate the polymer, and deprotected using trifluoroacetic acid (3 mL).

CAS INDEXING IS AVAILABLE FOR THIS PATENT..

AB The present invention discloses methods of use of facially amphiphilic polymers and oligomers, including pharmaceutical uses of the polymers and oligomers as antimicrobial agents and antidotes for hemorrhagic complications associated with heparin therapy. The present invention also discloses novel facially amphiphilic polymers and oligomers and their compositions, including pharmaceutical compositions. The present invention further discloses the design and synthesis of facially amphiphilic polymers and oligomers.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.
